

A photograph of a complex industrial machine, possibly a manufacturing or assembly line, enclosed within a multi-layered aluminum safety guarding system. The machine has various components, including pipes, valves, and electrical wiring. The guarding is made of aluminum frames and glass panels. The logo 'easy' is in large red letters, and '... SYSTEMS' is in smaller grey letters below it, with three red dots preceding the word 'SYSTEMS'.

MACHINE GUARDING

Safety is very important in a company. Machine operators must be able to work safely on and around machines and workplaces. By making use of our aluminum (ISB, BSB or NGP) profile systems, Easy Systems can use protective covers to build more complex shields in an economic way. This applies not only to safety but also to the creation of clean rooms, dust-free zones, exhaust cabinets, etc.

The assembly of these constructions can be done starting from a drawing of the customer, but also on the basis of drawings realized by our own experienced engineers. We have a whole range of plating as components for swing and sliding doors, gas springs, safety switches, etc. Installation on site is possible with our experienced technicians.
